备注	<ol style="list-style-type: none"> 1. Unless otherwise specified, all specifications and parameters shall be measured at 230VAC input, rated load, and ambient temperature of 25 °C. 2. Noise measurement method: test within a silent speaker box 300mm from the product. 3. Under low input voltage, it is necessary to derate the output. Please refer to the static characteristic 			

curve chart for details.

4. The power supply is considered as a component used in combination with the terminal equipment, as EMC is affected by the entire device, and the terminal equipment manufacturer needs to perform EMC confirmation on the entire device again.

5. The startup time is measured under a cold start state, and continuous startup and shutdown may increase the startup time.

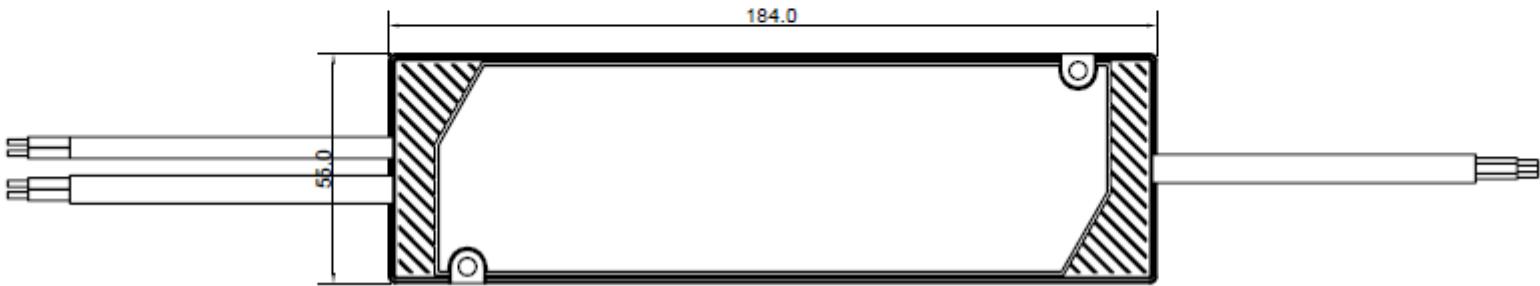

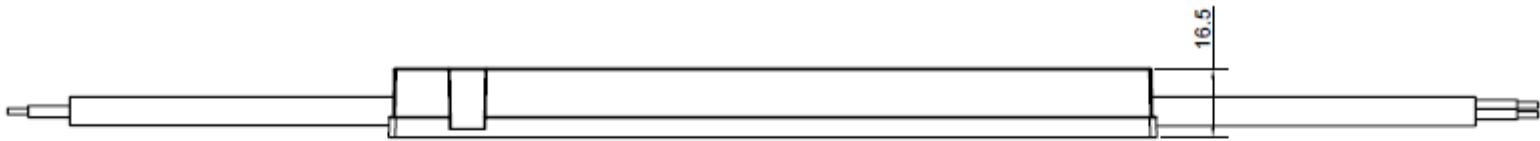

6. Models certified by CCC, CE, and TUV (EN61347-1, EN61347-2-13) are optional models. For details, please contact LETARON.
